

NALINKA HESHAN

Full Stack Developer

Melbourne, VIC | +61 420 531 995 | nalinkaheshann@gmail.com | linkedin.com/in/nalinka-heshan | github.com/nalinka1

PROFESSIONAL SUMMARY

- **6+ years** delivering in large enterprise environments: government, banking, healthcare and payments. AWS Certified Developer.
- Currently designing the integration layer for a claims platform replacement spanning 50+ interconnected systems, working across REST, SOAP and message-driven boundaries.
- Full stack across Python and Java backends, React and Angular frontends, and containerised services on Kubernetes and AWS.

TECHNICAL SKILLS

Frontend: React, React Native, Angular, TypeScript, JavaScript, HTML/CSS

Backend: Python, Java, Spring Boot, Node.js, Microservices, RESTful API, Event-Driven Architecture, Apache Kafka

AWS: Lambda, SQS, SNS, EC2, S3, RDS, DynamoDB, API Gateway, IAM, KMS, VPC, CloudWatch, CloudFormation, CDK

Containers & Platform: Kubernetes, Docker, Red Hat OpenShift, Terraform, CI/CD, Jenkins, GitHub Actions, Prometheus, Grafana

Integration & Distributed Systems: REST and SOAP web services, MQ messaging, enterprise integration, legacy modernisation, distributed system troubleshooting

Security & Identity: Microsoft Entra ID, SSO, OIDC workload identity federation, RBAC and custom roles, managed identities, Key Vault, IAM policy design, least-privilege scoping

Databases: PostgreSQL, Oracle, MySQL, MongoDB, DynamoDB. Schema design, complex SQL, migration and reconciliation

Other: Agile/Scrum, SDLC, JIRA, Confluence, Code Review, Test Automation (Cypress, Selenium)

CERTIFICATIONS

AWS Certified Developer - Associate | July 2025

AWS Certified AI Practitioner | August 2026

WORK EXPERIENCE

Software Engineer | Transport Accident Commission (TAC)

Melbourne & Geelong, VIC | Dec 2025 - Present

- Reverse engineering 50+ interconnected systems on **an enterprise transformation** program, designing the integration layer for TAC's next claims platform.
- Building integrations across platform boundaries using REST and SOAP web services and MQ messaging.
- Migrated 13,000+ financial records into the core platform. 100% accuracy, zero reconciliation issues, legacy system decommissioned.
- Automated document extraction into structured tables via scheduled batch jobs, feeding analytics and reporting.
- Documented the Domino document management services, replacing informal knowledge with a basis for future-state design.

Java, Oracle SQL, REST/SOAP Web Services, MQ Messaging, Jenkins, Git, JIRA, Confluence

Software Engineer | Cloud Solutions International

Colombo, Sri Lanka | Jul 2023 - Dec 2025 (remote from Australia from Jun 2025)

- Designed and owned a payment and billing platform end to end. Live two years, USD 100M+ in annual transactions.
- Cut invoice failure rates to 0.1% through a workflow redesign.
- Provisioned AWS infrastructure as code with CDK and CloudFormation across Lambda, EC2, S3, RDS, SNS and SQS.
- Ran production Kafka at transactional scale. Resolved offset commit failures, consumer concurrency and rebalancing issues.
- Operated containerised services on Docker and Kubernetes at 99.9% uptime.
- Built a real-time drug interaction service in Node.js, checking prescriptions against patient history without slowing the workflow.
- Delivered the Angular frontend alongside the Spring Boot services behind it, cutting page load time by 40%.
- Spent six months onsite with the client in Saudi Arabia. Reviewed code and paired with less experienced engineers.

Java, Spring Boot, Angular, Node.js, Kafka, PostgreSQL, Oracle, AWS (CDK, CloudFormation, Lambda, EC2, S3, RDS, SNS, SQS), Docker, Kubernetes, Jenkins

Senior Software Engineer | Qbitum Solution (Pvt) Ltd

Colombo, Sri Lanka | Oct 2022 - Jul 2023

- Migrated Seylan Bank's core digital platform onto Red Hat OpenShift. Live financial system, zero disruption at cutover.

- Engineered an AWS pipeline for real-time ingestion and anomaly detection. Processing time down 25%.
- Stood up Prometheus and Grafana monitoring plus load testing ahead of the production cutover.
- Wrote a Selenium regression suite covering core banking customer journeys.

Java, Spring Boot, AWS (EC2, S3, Lambda, DynamoDB, Kinesis, IoT), Red Hat OpenShift, Kubernetes, Docker, Kafka, Prometheus, Grafana, Selenium

Software Engineer | Zilingo

Colombo, Sri Lanka | Mar 2020 - Sep 2022

- Developed core backend services for a high-volume eCommerce marketplace through rapid transaction growth.
- Developed analytics systems on Apache Druid and Apache Flink, improving data accuracy across client reporting by 15%.
- Contributed to a major architectural change that improved platform scalability.

Java (Play Framework), Druid, Flink, Kafka, MongoDB, Jenkins, Grafana

Intern - Telecommunication Engineer | Huawei Technologies Lanka

Colombo, Sri Lanka | Jun 2018 - Dec 2018

- Worked with the networking team on server configuration, troubleshooting and data analysis.

PROJECTS

AWS Event-Driven Order Platform | 2025 - 2026

- Serverless order flow on API Gateway, Lambda, DynamoDB, SNS and SQS, provisioned with AWS CDK.
- DynamoDB to Aurora PostgreSQL migration with an idempotent upsert script and contract tests comparing pre- and post-migration responses.

AWS CDK, API Gateway, Lambda, DynamoDB, Aurora PostgreSQL, SNS, SQS, S3 | github.com/nalinka1/aws-order-flow

99Yards - Vendor-Client Platform for the Textile Industry | 2025

- React Native mobile application with a Spring Boot backend on Google Cloud, built for a US client and tuned for performance on low-end devices.

React Native, Firebase, Google Cloud, Spring Boot

claims-lakehouse, Medallion Data Pipeline | 2026

- Python pipeline over 158k insurance claim payment records. Bronze, silver and gold layers with window-function deduplication.
- Data quality quarantining that records reject reasons rather than dropping rows, plus a reconciliation layer verifying record counts and payment totals across every layer.

Python, PySpark, Delta Lake, Azure Databricks

Multi-Cloud Secure Document Platform | 2026, in build

- Terraform-provisioned Azure landing zone with remote state, Entra ID, custom RBAC roles and managed identities pulling secrets from Key Vault with no credentials in code.
- Cross-cloud OIDC workload identity federation, with negative tests proving expired tokens and wrong identities are denied.

Terraform, Bicep, AWS CDK, Entra ID, Azure RBAC, Key Vault, S3, KMS, IAM, GitHub Actions, OIDC

EDUCATION

B.Sc. Engineering (Hons.), Electronic and Telecommunication Engineering

University of Moratuwa, Sri Lanka | 2016 - 2020
